1. Techsol is proud to announce the launch of zPoint Products!

Delta, BC - March 25, 2006

The Evolution of the zPoint

- Developers of Commercial Buildings want **lower construction costs**.
- Operators of Commercial Buildings want **lower operating costs**.
- Users of Commercial Buildings want **more comfort and convenience**.

zPoint Products is addressing ALL of these needs with the ZigBee Wireless End-point -- or "zPoint".

With the official release of the ZigBee standard in 2005, the technology was in place to create such solutions as the zPoint Wireless End-points, but on our terms, which means **using open standards wherever possible**. Thus, **the zPoint is a monitored or controlled end-point, connected by ZigBee wireless mesh-networking, but communicating with other open systems** and supporting a variety of messaging protocols including native ZigBee ZDP, Mod-bus, and ANSI 709.1 profiles — the object-based standard for device connectivity within the Building Automation industry.

Wireless Technology has the potential to provide benefits to a wide range of applications. However, the technology has been complex, costly, and vendor-specific -- at least until now.

zPoint Products, backed by the engineering and manufacturing resources of Technical Solutions Inc., is about to change all of that.

Watch for our zPoints in the near future. They will change Building Automation as you know it!

See our website for details www.zPointProducts.com

zPoint Products is a wholly owned division of Technical Solutions Inc. (Techsol)
See our products website for details www.medallionsystem.com or call 888 TECHSOL (888.832.4765 or 604.946.8324) for more details, or e-mail sales@techsol.ca for further information.

Techsol is head-quartered in Delta, British Columbia, where the mighty Fraser River meets the Pacific Ocean.
